DISCOVERED A CAVE.

Railroad Workmen Find the Cause

(From The Bawesville Flaktorales). The railroad people last week discovered the cause of the frequent washoust cert of the cause of the frequent washoust ever almost the railroad was built. It vill be remembered that the road bed at this place like at base of a bill probable 200 feek high, while on the opposite stde is the Otto river with an abrupt bank, making a seene resembling Hudson river. For years every wery hard rain the track at the above named place has alipped, to move toward the river, cetting the company much money and annoyance. Last week it was concluded by the engineer of the road to put in a bridge at this troublesome point, and work was begun. Some of the bands notified a stream of water coming to the surface of the control of th

of all their troubles, and have accordingly remedied it.

When the cave is explored and arranged the Texas people will probably run excursions down here. It is hoped that Col. McCracken will place either Ridgeley Cayce or Harry Mordue at the entrauca to take tickets, as the job would suit either.

15th, day of April A. D. 1768.

The original instinctions from the Penns and Lord Waitimors are with the field notes, together with a certificate from the Royal Society antiorizing Manitode and agreeing to pay titem. 230 for doing the work. It took them nearly a month to measure the degree; probably that was the best paid month they spent in America, for though the field notes do not disclose the compression given by the Penns and Lord Baltimors.

spent in America, for though the first more do act disclosue the compensation given by the Fenns and Lord listilinory, it is hardly probable that it was £200 a month for more than sixty months. Mason and Dixon reached Philadel, phis from Rapland on Nov. 19, 1763; they had salled in September, probably, On Dec. 5 they determined the situation of the same in Certained the situation of the same in Certained the situation which that has in Certained the situation of the same in Certained the same in Certained the Southern boundary thereof." They found it is latticate to 3 30 feet 20" N. After that they went to work, history shows with what results. Up to June, 1707, they were busy along the borders of Pennsylvania and Mary Isand; it reafter they started to trace the 'West inne to its Western extremitly,' Sir William Johnson having obtained the consent of the Indiana to the dred doing so. They covived carriedly, and and this lattice is a single size of the same size o

Indians to their doing so. They received it erractions about treating the Indians carefully, and got this it pon June 18: "The Comm sincers recumened to Measrs. Mason and Doon that the spirmon input on to be given to the Indians through the policy of the Indians and the Indians with the Indians and the Indians are the Indians and Indians and Indians are the In

Fisher, Drugglet.

Rabert B. avia Killed By a Runaway Mule.

Robert B-avia, a young boy thirteen
years of age, met death in a painful way,
yestenday at noon, near Ball Pown. When
the time to quit work for dinner came
the little feilow stradded a made and
started for the stable. While on his way
a dog frightened the mule and he commenced to run, this scared the boy and
the lost control ol himself, as well as of
the mule. He became entangled in the
hances and was dragged for some distance, the mule all this time kicking him
in the breast, tearing the fleash completety off of him. Clint beavin, the boy's
father, had concluded to wail, and upon
nearly reaching the stable, he found the
mile standing perfectly still with he boy

Who's Your Blacksmith?

ommon Sense Points Care of Horse's Feet,

NO FOOT-NO HORSE

(From the Farm Journal.)
Don't send just anybody with the borses when they are to be shoot, or younself, or have some competent persons who will see that it is propary done. The shoes should cover that crust wall all around the foot, and should a strend stright back from the quarte it should be of uniform thickness around.

It should be of uniform thickness ail around.
Light shoes are preferable to heavy ones and wear just as long, even if not not the light that the light should be also be also be able to the light should be also be held in place.
A light shoe may also be held in place to with see anile, thus demanding the waij of the hoof Iees. If possible, nee but there nails to a dide, and have them as far forward as possible.
This foot needs the time has it would have worm away without shoes. Ordinarily the range will reduce the sole sufficiently without the knife.
Never allow the range to be used on the Never allow the range to be used on the

narily the rasp will reduce the sole suf-ificiently without the knife.

Never allow the rasp to be used on the outer portion of the foot. If the horse forge or click from over-reaching, instead of setting the hind shoes back so they will not protect the wall of the foot, use lighter shoes behind and heavier ones forward. This encourages the throwing forward further of the front feet and keeps them out of the way of the feet which strike them of the foot of the years old if you whish him to have tough feet, then let him go harefooted awhile between each pair of shoes. Two sets of shoes a year are enough for any farm horse.

Don't let the blacksmith put a hot shoe on your horse's hoof, but fit the shoe with a rasp.

Insiet on his making the shoe to fit the foot, not the foot to fit the shoe.

The front foot le naturally round, the hind one sholong. Keep them so, Make him keep his rasp off the outside of the

Hood's Sarsaparilla

It is a great mistake to allow shoes to go two and three months without being reset. This is one cause of corns and other troubles. The freq of the foot onght not to be pared except to merely cut away ragged purposes to merely cut away ragged cleaned every time his body is groomet; for this purpose a foot hook should be used.

when you once find a good blacksmith, attick to him.

Tasture is nature's remedy for all allTasture is nature's remedy for all allTasture is nature's remedy for all allTasture is nature's remedy for all alltions and the state of the state of the home is tender and when exposed is antipet to many diseases. Nature has provided the fetlock as a protection, and as such ist if remain.

When the horse comes into the stable after being unharcesed the heels aloud be well-braushed out. Hand rubbing is preferred to washing, as the long insir can searcely be dried again. If dirt is a state of the stable of the sta

corns may result.

Any disease of the foot leads to others. This shows the necessity of instant attention, even to the slightest liamness. The owner should always go with the horse to be should and see that the clinch, es are each one raised, and not allow that horse to be should always go with the horse to be should always go, with the case are each one raised, and not allow that and wends the shee off and thereby enlarge every other nail hole and weaken the future hold of the shoe.

The best way to have good feet on your horse is to breed for feet. If your mare has poor feet don't hreed her unless she has many compensating qualities; on no account hreed to a horse with poor feet. I believe good or had feet and leav reproduce themselves more sarely than anything eige.

The third the standard of the shoes and work without the standard of the shoes and work without the standard of the shoes and work without it resews and strengthens the feet. It is a great the pin warm weather to tara horse out at night, the wet grass seems to be just what the feet need to keep them from getting to dry and hard, those without shoes.

They are so small that the most sensi-
